Welcome!...and thank you for showing interest in the course, *Teaching for Tomorrow...Learning from Yesterday*

This course is designed to guide discussion and provide examples of how current technological initiatives, literacy skills, social emotional learning, and student centered pedagogical reform is being incorporated into classrooms across grade levels and content areas. How all these techniques are used to teach the core skills that students need to attain, to be useful in today's/tomorrow's workforce/society will be emphasized.

Specifically, the following will be discussed:

- The Portrait of a Graduate initiative
- The “Seven Survival Skills” Identified by Tony Wagner in “Global Achievement Gap”
- The value of lens and perspective when evaluating sources
- How Dr. Marc Brackett’s “RULER” technique could be applied to you and in your classroom
- The extent to which instructional technology should be utilized. Particularly how to use it to support the learning of core skills and the impact Artificial Intelligence (AI) has on its use
- The evaluation of authentic assessments and student centered instructional strategies such as Socratic Seminar

All necessary resources will be shared with you on Canvas.
